This listing of claims will replace all prior versions and listings of the claims in the application:

Listing of the Claims:

- 1. (Cancelled).
- 2. (Cancelled).
- 3. (Currently amended) The kit of Claim 2 52 wherein said means for retaining is operative to maintain said cap in a compressed position.
 - 4-9. (Cancelled).
- 10. (Currently amended): The kit of Claim 9 <u>56</u> wherein said clamp includes at least one inwardly extending locating projection.
- 11. (Original): The kit of Claim 10 wherein said cap includes an inwardly extending channel adapted to receive said inwardly extending locating projection.
- 12. (Currently amended): The kit of Claim 9 <u>56</u> wherein said clamp includes first and second opposed, inwardly extending locating projections.
- 13. (Original): The kit of Claim 12 wherein said cap includes first and second opposed, inwardly extending corrugations adapted to receive said first and second locating projections.
- 14. (Currently amended): The kit of Claim 9 <u>52</u> wherein said clamp includes first and second opposed walls and a connecting portion joining said first and second walls, said connecting portion and said first and second walls defining a cavity to receive said cap, said gel and the connection.

In re: Fitzgerald et al. Serial No.: 09/660,062

Filed: September 12, 2000

15. (Currently amended): The kit of Claim 9 58 wherein said clamp includes first and second opposed walls and a living hinge joining said first and second walls, said living hinge and said first and second walls defining a cavity to receive said cap.

- 16. (Currently amended): The kit of Claim 9 <u>52</u> wherein said clamp includes first and second opposed walls and first and second latching structures on said first and second walls, respectively, said first and second latching structures adapted to secure said clamp in a closed position about said cap, said gel and the connection.
- 17. (Currently amended): The kit of Claim 9 <u>52</u> including a flexible tie wrap to secure said clamp in a closed position about said cap, said gel and the connection.
- 18. (Original): The kit of Claim 17 wherein said clamp includes first and second opposed walls and first and second passages defined in said first and second walls, respectively, said first and second passages adapted to receive said tie wrap.
- 19. (Currently amended): The kit of Claim 9 <u>52</u> wherein said clamp includes separable first and second members and each of said first and second members has first and second latch structures on either end thereof, said first and second latch structures of said first member being interlockable with said first and second latch structures of said second member to secure said first and second members together and about said cap, said gel and the connection.
- 20. (Currently amended): The kit of Claim 9 <u>56</u> wherein said cap includes an outwardly extending positioning projection and said clamp has a locating hole defined therein and adapted to receive said positioning projection.
- 21. (Currently amended): The kit of Claim 4 <u>52</u> wherein said cap includes a plurality of expandable corrugations.

Page 4

22. (Currently amended): The kit of Claim 4 <u>52</u> wherein said cap is formed of a material having a flexural modulus of between about 5,000 and 100,000 psi and a durometer of between about 40 Shore A and 90 Shore D.

- 23. (Currently amended): The kit of Claim 4 <u>52</u> wherein said gel has a Voland hardness of between about 5 and 30 grams force, an elongation of at least 100%, a stress relaxation of no more than 50%, and a tack of greater than about 6 grams.
 - 24. (Cancelled).
 - 25. (Cancelled).
- 26. (Currently amended): The assembly of Claim 24 <u>61</u> wherein at least a portion of said gel is elongated at least 50%.
- 27. (Currently amended): The assembly of Claim 24 61 wherein said cap is compressed.
- 28. (Currently amended): The assembly of Claim 27 wherein said cap is maintained in compression by said means for retaining clamp.
 - 29-33. (Cancelled).
 - 34. (Original): A protected electrical connection assembly comprising:
 - a) a compressed, flexible cap having a closed first end and a second end opposite said first end, said cap including:

an interior wall defining a cavity;

Page 5

an opening formed in said second end and communicating with said cavity; and

first and second opposed, inwardly extending corrugations;

- b) a stub connection including a pair of elongated, electrically conductive elements joined at respective terminal ends thereof, said conductive elements defining a crotch therebetween and extending through said opening, said terminal ends and at least a portion of each of said conductive elements being disposed in said cavity of said cap;
- c) a gel disposed in said cavity and interposed between said stub connection and said interior wall of said cap, wherein said gel is elongated and elastically deformed and applies an outward force against said connection and said interior wall, at least a portion of said gel being elongated at least 50%; and
- d) a clamp retaining said cap on said connection and maintaining said cap in compression, said clamp including:

first and second opposed walls; and

first and second opposed locating projections extending inwardly from said first and second opposed walls, said first and second locating projections disposed in said first and second opposed inwardly extending corrugations, respectively, and adjacent said crotch;

e) wherein substantially all exposed, electrically conductive portions of said connection are substantially completely immersed in said gel.

35-46. (Cancelled).

47. (Currently amended): The method of Claim 40 <u>62</u> including the step of expanding the cap to accommodate the stub connection.

48. (Original): The method of Claim 47 wherein said step of expanding includes the step of expanding corrugations in the cap.

49-51. (Cancelled).

- 52. (Previously presented): A connection protector kit for use with an electrical stub connection, said kit comprising:
 - a) a flexible cap having first and second opposed ends and an interior wall defining a cavity, said first end being closed and an opening being formed in said second end and communicating with said cavity;
 - b) a gel disposed in said cavity;
 - c) means for retaining said cap on the connection, said means for retaining including a clamp; and
 - d) wherein said cavity and said gel are adapted to receive the stub connection; and
 - e) wherein said clamp includes at least one inwardly extending locating projection.
- 53. (Previously presented): The kit of Claim 52 wherein said cap includes an inwardly extending channel adapted to receive said inwardly extending locating projection.
- 54. (Previously presented): A connection protector kit for use with an electrical stub connection, said kit comprising:
 - a) a flexible cap having first and second opposed ends and an interior wall defining a cavity, said first end being closed and an opening being formed in said second end and communicating with said cavity;
 - b) a gel disposed in said cavity;
 - c) means for retaining said cap on the connection, said means for retaining including a clamp; and

Page 7

- d) wherein said cavity and said gel are adapted to receive the stub connection; and
- e) wherein said clamp includes first and second opposed, inwardly extending locating projections.
- 55. (Previously presented): The kit of Claim 54 wherein said cap includes first and second opposed, inwardly extending corrugations adapted to receive said first and second locating projections.
- 56. (Previously presented): A connection protector kit for use with an electrical stub connection, said kit comprising:
 - a) a flexible cap having first and second opposed ends and an interior wall defining a cavity, said first end being closed and an opening being formed in said second end and communicating with said cavity;
 - b) a gel disposed in said cavity;
 - c) means for retaining said cap on the connection, said means for retaining including a clamp; and
 - d) wherein said cavity and said gel are adapted to receive the stub connection; and
 - e) wherein said clamp includes first and second opposed walls and a living hinge joining said first and second walls, said living hinge and said first and second walls defining a cavity to receive said cap.
- 57. (Previously presented): A connection protector kit for use with an electrical stub connection, said kit comprising:
 - a) a flexible cap having first and second opposed ends and an interior wall defining a cavity, said first end being closed and an opening being formed in said second end and communicating with said cavity;
 - b) a gel disposed in said cavity;

c) means for retaining said cap on the connection, said means for retaining including a clamp; and

- d) wherein said cavity and said gel are adapted to receive the stub connection; and
- e) wherein said cap includes an outwardly extending positioning projection and said clamp has a locating hole defined therein and adapted to receive said positioning projection.
- 58. (Previously presented): A protected electrical connection assembly comprising:
 - a) a flexible cap defining an opening and having an interior wall defining a cavity, said cavity communicating with said opening;
 - b) a stub connection including a pair of elongated, electrically conductive elements joined at respective terminal ends thereof, said conductive elements defining a crotch therebetween and extending through said opening, said terminal ends and at least a portion of each of said conductive elements being disposed in said cavity of said cap;
 - c) a gel disposed in said cavity and interposed between said stub connection and said interior wall of said cap; and
 - d) means for retaining said cap on said connection;
 - e) wherein said means for retaining includes a clamp, said clamp including at least one inwardly extending locating projection.
- 59. (Previously presented): A connection protector kit for use with an electrical stub connection, said kit comprising:
 - a) a flexible cap having first and second opposed ends and an interior wall defining a cavity, said first end being closed and an opening being formed in said second end and communicating with said cavity; and
 - b) a clamp to retain said cap on the connection;

Page 9

wherein said cavity is adapted to receive the stub connection;

- d) wherein said clamp includes at least one inwardly extending locating projection.
- 60. (Previously presented): The kit of Claim 59 wherein said cap includes an inwardly extending channel adapted to receive said inwardly extending locating projection.
- 61. (Previously presented): A protected electrical connection assembly comprising:
 - a) a flexible cap defining an opening and having an interior wall defining a cavity, said cavity communicating with said opening;
 - b) a stub connection including a pair of elongated, electrically conductive elements joined at respective terminal ends thereof, said conductive elements defining a crotch therebetween and extending through said opening, said terminal ends and at least a portion of each of said conductive elements being disposed in said cavity of said cap; and
 - c) a clamp retaining said cap on said connection;
 - d) wherein said clamp includes at least one inwardly extending locating projection and said cap includes an inwardly extending channel receiving said inwardly extending projection.
- 62. (Previously presented): A method for protecting an electrical stub connection, said method comprising the steps of:

providing a cap having a cavity and a gel disposed in the cavity; inserting the stub connection into the cavity and the gel such that the stub connection displaces and thereby deforms and elongates the gel;

compressing the cap to further displace and thereby deform and elongate the gel; and

Page 10

securing a clamp about the cap to retain the cap on the stub connection and to maintain the gel in the elongated state such that the gel exerts an outward force on each of the stub connection and the interior wall of the cap; wherein said step of securing a clamp includes inserting a locating

projection of the clamp into a crotch of the stub connection.

63. (Cancelled).

- 64. (New): The kit of Claim 52 wherein said cavity and said gel are adapted to receive the stub connection such that said gel is elongated and elastically deformed.
- 65. (New): The method of Claim 62 including elastically deforming and elongating the gel about the stub connection.
- 66. (New): The method of Claim 65 including deforming and elongating the gel about the stub connection by at least 50%.
